

4Life® Transfer Factor™

ADVANCED FORMULA

The Superpower of Immune System Support

Synergy. You are familiar with the concept—an outcome that is greater than the sum of its parts. This is exactly what 4Life aimed for when we decided to combine two distinctive sources of transfer factors. And it's exactly what we achieved.

4Life Transfer Factor Advanced Formula and 4Life Transfer Factor Chewable include our proprietary Transfer Factor E-XF blend to create unique and highly effective supplements that provide unprecedented support to your body's immune system—the system responsible for fighting off disease and infection, and for keeping you healthy. They work by educating and strengthening your immune system for superior health support throughout your life.

4Life Transfer Factor Advanced Formula and 4Life Transfer Factor Chewable provide scientifically advanced immune support with the convenience of an encapsulated formula or a citrus cream flavored chewable tablet.

Key Points

- **Transfer factors:** One of the strongest forces in nature for transferring and ensuring good health, transfer factors have taken their place in the forefront of nutritional science. Transfer factors are tiny molecules that transfer immunity information from one entity to another, such as between a mother and her infant who she breastfeeds. Transfer factors educate your naïve immune cells about a present or potential danger in your body along with a plan for action. Although the most notable function of these smart molecules is to speed up the recognition phase of an infection, making the duration of an illness shorter, they also promote the immune system's ability to remember past invasions, allowing your body to more quickly respond to similar health threats.

Developed exclusively by 4Life, using patented and patent-pending technology, our Transfer Factor E-XF proprietary blend calls upon the knowledge of two sources, providing an enhanced combined effect of transfer factors from both cow colostrum and egg yolks. Research shows that the immune-building effects of this transfer factor blend are more potent than that of colostrum or egg sources alone.

- **Scientifically Studied:** 4Life researchers and scientists developed this Advanced Formula in an effort to further maximize immune system support using transfer factor molecules. Results of an independent study conducted at the Russian Academy of Medical Science conclusively showed the ability of 4Life Transfer Factor Advanced Formula to boost Natural Killer (NK) cell activity to 283 percent above normal immune response.¹
- **Shared Immune Knowledge:** The two most abundant and safest sources of transfer factors come from cow colostrum and egg yolks. Transfer factor molecules can be shared safely and effectively. Whether they are transferred from cow to human or from chicken to human, transfer factors are not species specific.

With transfer factors you have the ability to borrow immune memory from the cow and chicken, so when you come in contact with the same infectious organisms, you have an incredible advantage— your system is ready to remember, recognize and respond to foreign invaders faster and more aggressively. The Transfer Factor E-XF proprietary blend found in 4Life Transfer Factor Advanced Formula and 4Life Transfer Factor Chewable combines polyvalent transfer factors from both the cow and chicken for synergistic immune system support unlike any other product available today.

- **Systemic and Active Nature:** The small molecular weight of transfer factors allows them to be absorbed into the bloodstream, which enables them to work freely throughout the entire body. They provide continuous benefit to the immune system because their immune messages are passed to immune cells, which have several weeks of life within the body. Transfer factors enhance cellular immune functions, including enhancing natural antibody production through the entire body.

Did you know?

Transfer factors were first discovered in 1949 by Dr. H. Sherwood Lawrence while researching tuberculosis. Since that time, hundreds of clinical studies and papers have been published on transfer factors, at a cost of over \$40 million.

The Centers for Disease Control (CDC) has estimated that one half of the more than 100 million yearly prescriptions for antibiotics are for non-bacterial conditions where antibiotics would be ineffective. This alarming trend has greatly contributed to the amount of antibiotic resistance.

Technical Points

- Natural Killer (NK) cells are important immune cells that seek and destroy harmful cells through direct contact. When invaders enter your body, these NK cells are on the front lines of your immune defense.
- The extraction processes for transfer factors from colostrum and egg sources are protected by US patents 4,816,563 (cow colostrum) and 6,468,534 (egg yolks) with other patents pending.
- Transfer Factor E-XF is so beneficial to individual health that it is included in many of 4Life's products, including: RiteStart, NutraStart, Fiber4Life and others.

1. Blind study conducted by Dr. Anatoli Vorobiev, Head of Immunology, at the Russian Academy of Medical Science. Cancer containing cells were subjected to Cytotoxicity testing. Samples containing 4Life Transfer Factor from cow and egg sources were tested individually and in blended forms for incubation periods of 24 and 48 hours to determine the most beneficial combination and activation time.

CAPSULE DIRECTIONS: Take two (2) capsules daily with 8 oz of fluid.

Serving Size: One (1) Capsules
Servings Per Container: 60

Supplement Facts

Amount Per One (1) Capsule Serving	DV%
Transfer Factor E-XF™ 300 mg	**

A patented concentrate of transfer factors and other natural component from cow colostrum and egg yolk.

**Daily Value (DV) not established

Other Ingredients: gelatin capsule. KO

CHEWABLE DIRECTIONS: Take three (3) tablets daily. Additional tablets may be taken as desired.

Serving Size: One (1) Tablet
Servings Per Container: 90

Supplement Facts

Amount Per One (1) Tablet Serving	DV%
Transfer Factor E-XF 200 mg	**

A patented concentrate of transfer factors and other natural component from cow colostrum and egg yolk.

**Daily Value (DV) not established

Other Ingredients: fructose, maltose, sorbitol, natural flavors, stearic and malic acids, and silica. KO
